

# Carefree online data management

All your soil and water data in one online environment

**Online Data Management:**  
Groundwater  
Surface water

Waste water  
Process water  
Precipitation

Current velocity  
Soil moisture  
Discharge

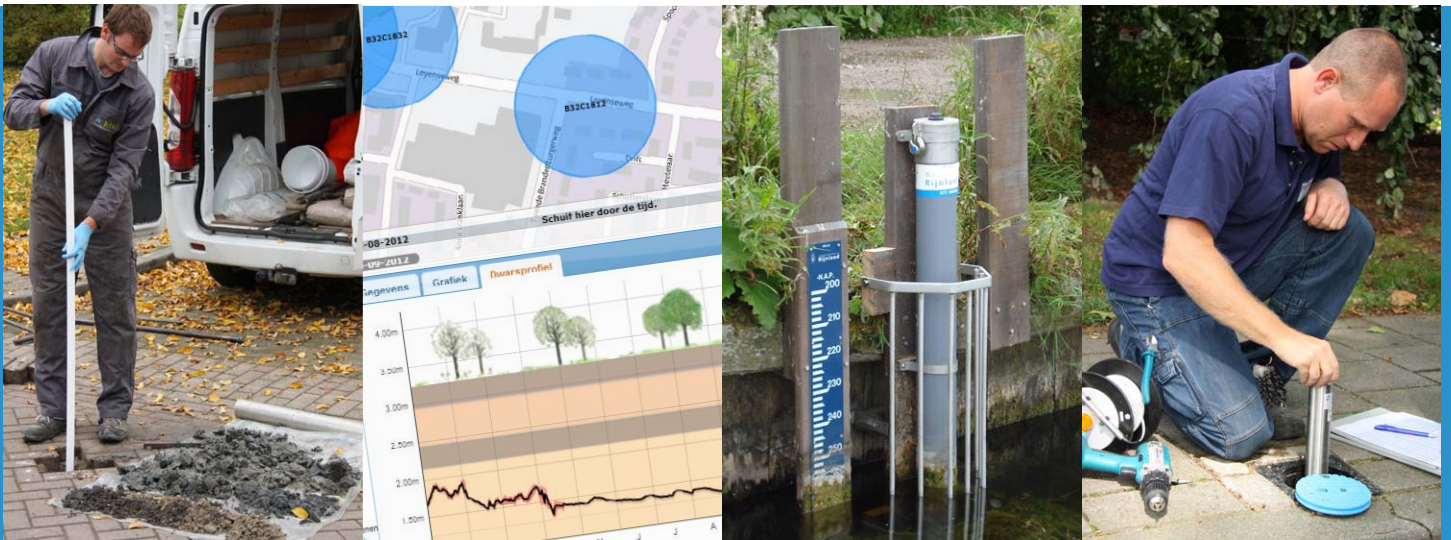

CAREFREE SOLUTIONS IS A CONCEPT BY

# Carefree data management within easy reach

The Carefree Solutions concept places you at the centre. Based on your needs, we provide the implementation and functionality for an online environment that enables you to manage your soil and water data.

Carefree Solutions enables you to effectively and efficiently monitor, visualise and manage quantitative and qualitative data regarding groundwater, surface water, waste water, process water, precipitation, flow rate, soil moisture and flow volume.

 Installation  Visualisation  Data collection  Maintenance

Whether you need to satisfy groundwater requirements, collect measurement data in varying frequencies or develop and implement policy, Carefree Solutions offers you a flexible management instrument that includes continuous monitoring of threshold values.

We install entire monitoring networks and can expand these if required. It doesn't matter whether existing monitoring points are involved or whether these need to be deployed temporarily or on a project basis. Extensive reporting facilities also enable you to present data via an internal or public online environment.

Carefree Solutions provides security of your measurement data. Together with research institute Alterra (part of Wageningen University & Research Centre in the Netherlands) we have developed a validation tool that guarantees your measurement data reliability.

**Carefree Solutions. The only thing you need to do is indicate which data you wish to receive, how often and in which way. We'll do the rest.**

	Basic	Premium
1. Installation	✓	✓
2. Visualisation (webportal)	✓	✓
3. Data collection and checks for correctness and probability	○	✓
4. Maintenance and management of the monitoring network	○	✓
5. Service level agreement (controlroom and risk management)	○	✓
5.1 Ten working days response time	○	✓
5.2 Two working days response time	○	○
5.3 Validation tool	○	○

## Carefree Solutions

# Data Management: Where, when and how you want it

Experience Carefree Solutions yourself?  
Contact our Sales department.

'We wanted to have a user-friendly website containing clear information.'

**WINNET**

'The data is neatly displayed on the website.'

**Gasunie**

'We left the technical details of the monitoring network to the expert.'

**Platform Water Vallei en Eem**

# Control and overview your soil and water data

Carefree Solutions means clear agreements and a transparent price structure. For instance, there's Carefree Solutions Premium in which we ensure that the monitoring network functions well for a fixed amount per monitoring point per month or year. You will also receive a complete equipment guarantee for the duration of the agreement.

## With Carefree Solutions

- You inform employees and citizens
- You identify too high or too low water levels in time
- You collect data for drainage design, sewage replacement and soil decontamination
- You contribute to long-term developments
- You gain insight into water quality
- You can see the most recent data from your monitoring locations at a glance
- You are assured of a monitoring network that functions continuously

## Carefree Solutions means

- Deployment of qualified personnel for maintenance, management and installation
- Professional support in constructing a monitoring network
- Siting of monitoring equipment with quality guarantee
- Equipment with vandalism-proof finish
- Alarm system at every desired level
- Precise and validated monitoring data
- Clear agreements
- Transparent pricing structure

## Experienced in soil and water since 1911

**All the soil and water investigation experience that we have gained since 1911 is reflected in the Carefree Solutions concept and we are delighted to be able to share this experience with you.**

We are convinced that Carefree Solutions will expand further in the future into a globally applicable concept with yet more monitoring facilities and a greater variety of parameters.
